Attorney Docket No.: NS-US035056 Amendment dated August 15, 2003

## AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph [0016] spanning at pages 3 and 4 with the following version:

[0016] In view of the above, the present invention provides a vehicle apparatus comprises a travel direction command determining section, an electric motor counterelectromotive force detecting section a travel direction command determining section and a wheel rotational direction determining section. The travel direction command determining section is configured to determine whether a forward travel command or a reverse travel command has been issued. The electric motor counterelectromotive force detecting section travel direction command determining section is configured to detect a counterelectromotive force of an electric motor that drives a wheel of a vehicle. The wheel rotational direction determining section is configured to determine whether the wheel is rotating in an opposite direction to a vehicle travel direction command determined by the travel direction command determining section, based on a determination that a polarity of the counterelectromotive force detected by the electric motor counterelectromotive force detecting section does not match the vehicle travel direction command determined by the travel direction command determining section.
